

AI RECRUITER – SHORTLIST A SUITABLE CANDIDATE FOR SPECIFIC ROLE

Project summary :

AI Recruiter – Shortlist a Suitable candidate for specific Job
Role Description 52% of talent acquisition leaders say that the most difficult part of their job is to shortlist the right candidate and 3% of candidates never hear back from a company after one touchpoint.

On the flip side, it's a challenge for employers to communicate well with all their candidates.

For high volume recruiting, this would require communicating with thousands of candidates, in addition to a recruiter's normal screening functions and other duties.

Artificial Intelligence enabled software bots can definitely provide a solution for this problem.

Project Requirements: IBM Cloud, IBM Watson, IBM Discovery, Node-RED

Functional Requirements: IBM cloud

Technical Requirements: WATSON-AI, Python

Software Requirements: Watson assistant, Watson discovery.

Project Deliverables: IBM Hack Challenge 2020

Project Team: Indhumathi.V

Keerthivasan.P

Swaminathan.M

Vijayalakshmi.V

Project Duration : 17 Days
